

The Master Plan is under environmental review as a Generic Environmental Impact Statement (GEIS) with a site-specific Environmental Impact Statement for the Shoreline section. The GEIS includes a detailed alternatives analysis, which adds to and expands upon the routes considered in the 2015 plan. The Breakneck Connector & Bridge, as they did in 2015/2016, have advanced separately through environmental review but are incorporated by reference in the larger GEIS. HHFT has provided regular updates on the environmental review. We have convened a special local committee to work on specific data points of local interest in advance of the GEIS, and look forward to the public hearing early 2024.
