

Hudson Highlands Fjord Trail

HHFT will have on land staff responsible for trail maintenance, including trash and recycling collection. The Fjord Trail design team is currently working on preliminary concept designs for the shoreline portion of the main trail. Just like any other waterfront park along the Hudson River or other waterway, reducing the amount of waste that winds up in the water is a central goal. We are looking at ways that the trail design itself can reduce that risk, as well as how frequent trash receptacles should be placed along the length of the trail to encourage proper disposal. This will also be approached from a programmatic standpoint through Leave No Trace signage and education.
