

Hudson Highlands Fjord Trail

The six main trailhead entries contemplated in the present Fjord Trail proposal will diffuse trail users over a 7.5-mile route. Combined with the shuttle system, organized parking supply *north* of the village and additional infrastructure improvements like public restrooms, these visitation management elements are designed to help take the existing pressure off the Village of Cold Spring by allowing visitors to get off crowded Main Street and away from residential side streets faster, or not end up on them at all. The trail will ensure safe and welcoming access to NYS parkland for all people who seek to enjoy it. More information on both the results of our visitation data studies and our visitation management strategy are forthcoming this winter (2024). Please stay tuned.
