

# Hudson Highlands Fjord Trail

The construction-era measures we'll take to protect against impacts to potentially present species, including tree removal in the seasonal window, having a snake and fence lizard monitor on site, and having an Education and Encounter Plan in place, are all coordinated through the DEC and in collaboration with OPRHP through the permitting process. There are cost estimates for both the Bridge and Breakneck Connector, which have been updated for the now 100% Construction Drawings (CDs). This estimate includes all prior value engineering efforts, which were completed before the environmental review for Breakneck and Bridge was complete.
