

Survey Methodology:

The Harris Poll conducted a survey online in the U.S. on behalf of Hudson Highlands Fjord Trail, Inc. among 400 Cold Spring, Philipstown, Beacon, and Fishkill (i.e., project area) residents, and 400 residents from additional communities in the Hudson Valley region (i.e., service area), ages 18+. Taken together, the project area and service area are referred to as the “surrounding Hudson Valley region” or “total region”. The survey was conducted April 3-25, 2024.

Data are weighted where necessary by age, by gender, race/ethnicity, education, and marital status, as well as county for the service area subgroup, to bring them in line with their actual proportions in the population.

Respondents for this survey were selected from among those who have agreed to participate in Harris Poll surveys. The sampling precision of Harris online polls is measured by using a Bayesian credible interval. For this study, the sample data is accurate to within ± 6.0 percentage points for the total (i.e., surrounding Hudson Valley region), ± 8.4 percentage points for the project area as a whole, ± 11.9 percentage points for Cold Spring, ± 13.2 percentage points for Philipstown, ± 13.3 percentage points for Fishkill, ± 14.9 percentage points for Beacon, and ± 7.1 percentage points for the service area, using a 95% confidence level. This credible interval will be wider among subsets of the surveyed population of interest.

All sample surveys and polls, whether or not they use probability sampling, are subject to other multiple sources of error which are most often not possible to quantify or estimate, including, but not limited to coverage error, error associated with nonresponse, error associated with question wording and response options, and post-survey weighting and adjustments.

About The Harris Poll

The Harris Poll is one of the longest-running surveys in the U.S, and has tracked public opinion, motivations, and social sentiment since 1963 to uncover essential insights about society. Every year, the Harris Poll surveys millions of people on the trends that are shaping our modern world across a variety of sectors. Its research is widely used by businesses, media, politicians, and researchers to understand public sentiment, win elections, pass legislation, and inform critical decision-making.

Q205. How much do you agree or disagree with the following statements?
